

Your shifts in your own calendar

Subscribe once and every shift you're given appears in the calendar you already use — and updates itself when the schedule changes.

Mobile app · Profile

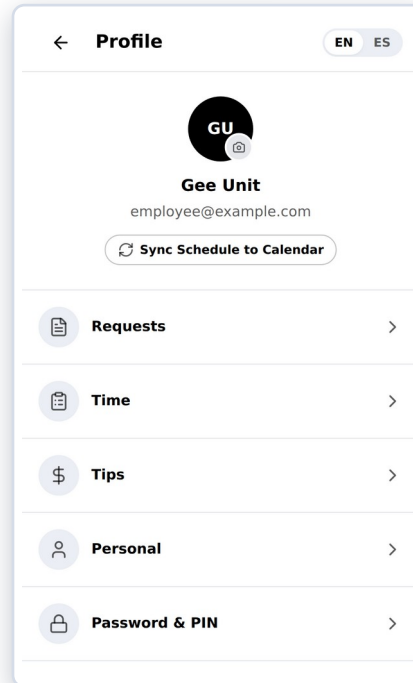

One tap, then confirm with your phone

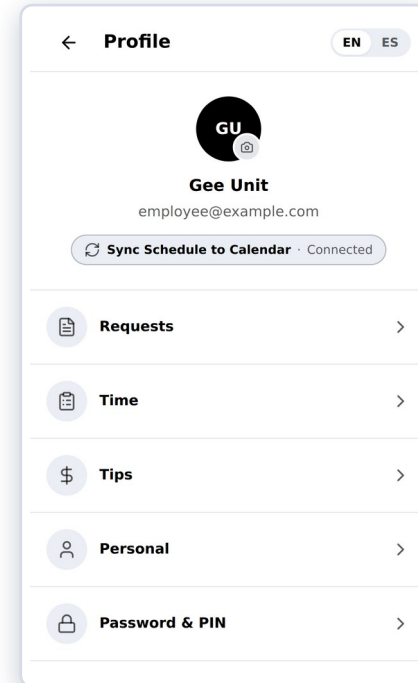

1. Open your Profile

Tap your initials in the top right of any tab.

2. Tap Sync Schedule to Calendar

It's the button just under your name on the Profile page.

3. Your phone takes it from there

iOS or Android asks which calendar to put it in — that prompt is your phone's, not Kronto's. When it's done the button reads Connected.

How the sync behaves

1

It updates on its own

This is a calendar subscription, not a one-off copy. When your manager changes a shift, your calendar follows — usually within a few hours, depending on your phone.

2

It's read-only

Editing the event in your calendar app changes nothing in Kronto. Swaps and time off still go through the app.

3

To stop it

Tap the same button again while it reads Connected. That revokes the link, and the shifts stop updating.

4

It's personal to you

The link is tied to your account. Don't share it — anyone with it can see your schedule.

Not seeing new shifts? calendar apps refresh subscriptions on their own schedule. Removing and re-adding it forces a fresh pull.
